

In this lesson we are going to install Windows Server 2016.

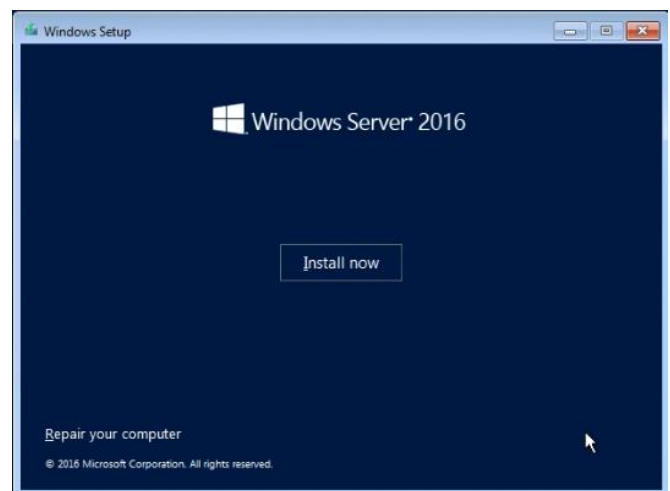

Open Virtual Box.

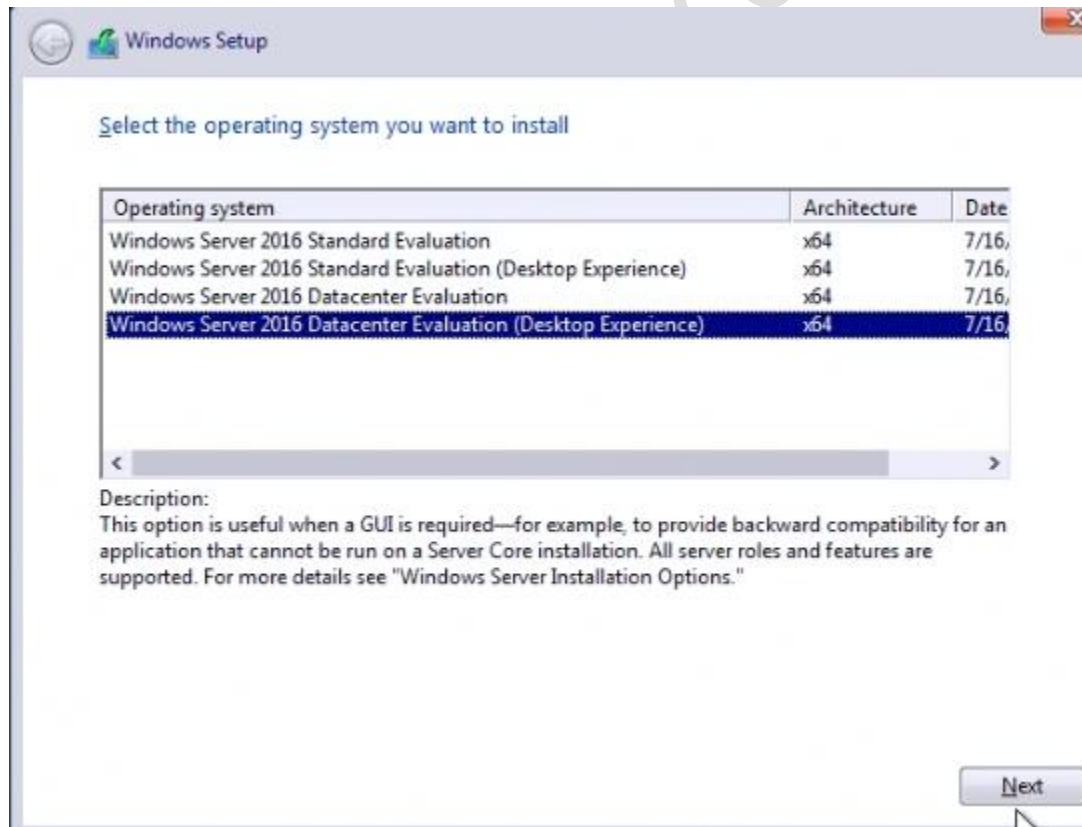

Select the VM and press start.

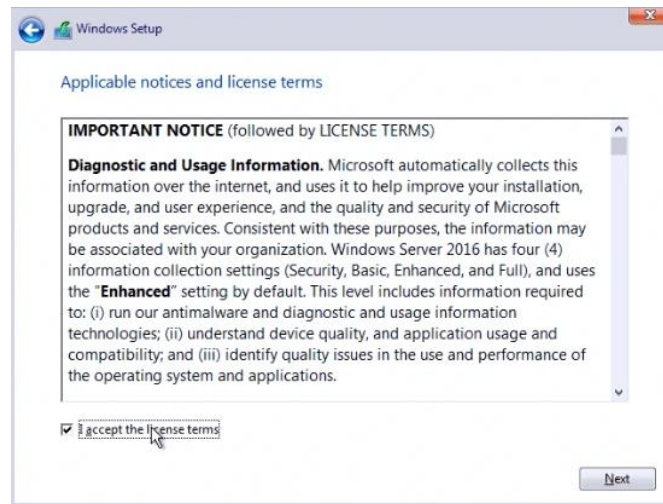

Select the language and Keyboard method. I select English. And click next. Then install now.

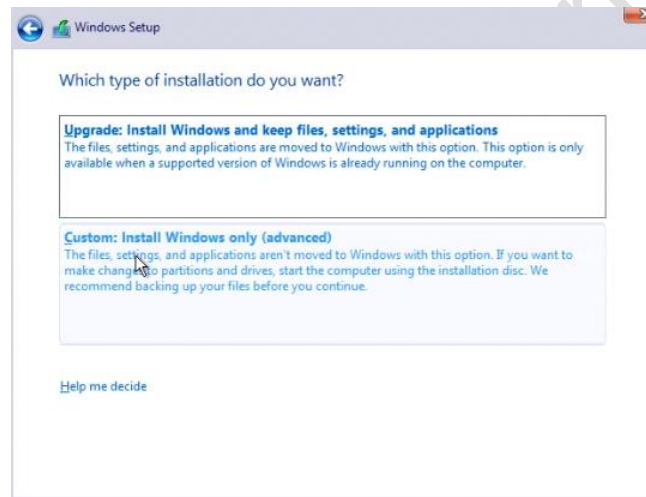

Choose the Windows Server 2016 Datacenter Evaluation (Desktop Experience). Then Click Next.

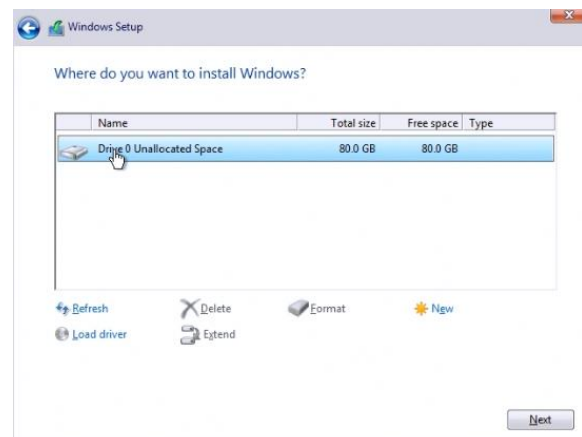

Accept the license term checkbox, and click next.

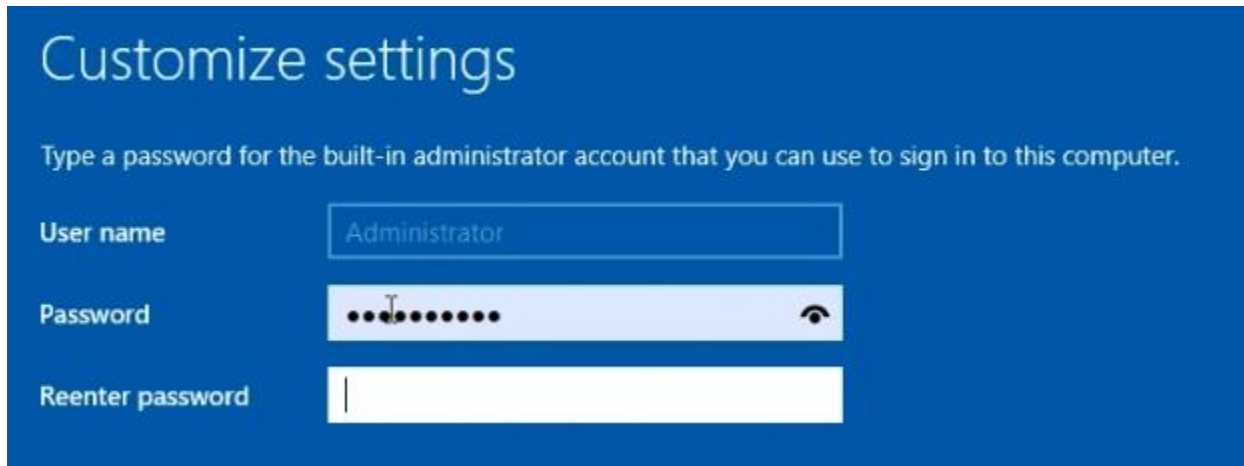

Choose the Custom: Install Windows only (advanced).

Choose the drive you want to install the operating system on and click next. Allow the install to complete.

Once the installation is complete you will need to type in a password. Make sure you remember the password.

Customize settings

Type a password for the built-in administrator account that you can use to sign in to this computer.

User name

Password 

Reenter password

Now the system will finish the installation and you will be brought to the login screen. Login with the credentials you just created.

We have successfully installed Windows Server 2016. In the next lesson we will be finishing up the installation by installing things like Virtual Box Guest Additions.
